

Kennedy Vomberg to provide sound advice to Aercoustics Engineering in leveraging best practices with Deltek Vision®

Toronto, Canada – July 20, 2009 – Aercoustics Engineering Limited, leaders in the field of acoustics, noise, and vibration engineering, has chosen Deltek Vision as the best tool best aligned to support the company's focus on overall business process improvement and provide reliable infrastructure in anticipation of continued growth and profitability. The Aercoustics selection team felt that the 'best of breed' professional services application (PSA) solution was definitely an important investment to be made.

"As a company, we've spent the last several months working with a management consulting firm refining our corporate strategy and, importantly, our key operational processes in support of our business goals," said Bob Rimrott, Principal, Aercoustics Engineering. "It quickly became apparent that our current business management tools could not support the best practices we were seeking to adopt as a company. Kennedy Vomberg took the time with us to show how Vision could assist in refining some of our business practices and track metrics key to our success."

"We're excited to have Aercoustics join our growing list of Vision clients," said Don Kennedy, Principal of Kennedy Vomberg. "We feel that the 360 degree view of the business that Vision provides, from business development thru to project management, planning and accounting, will provide significant benefit helping to enable the newly defined corporate goals and objectives."

About Kennedy Vomberg

Burnside, Stendel + Reich Architects, Taylor_Smyth Architects, Terrapex Environmental, T. Harris Environmental, and The Thompson Rosemount Group.

About Aercoustics Engineering

Aercoustics Engineering Limited has dedicated itself to providing high quality consulting services in the science and engineering of acoustics, noise and vibration since its inception in 1971.

Their engineers bring over 100 years of collective experience, are the recipients of several awards, and have been involved with projects both domestically and internationally. Aercoustics projects include small ventures, to project management of major noise and vibration control, to leading edge acoustical design work, including CAD drawings and specifications

Integrating current technologies and skills into their work allows the firm to offer efficient, cost effective solutions to their clients, avoiding the expensive and over designed details that are evident in a less scientific approach
